

# Sprint Command Center

Simple solutions for a complex world.

**Control M2M provisioning, billing, device and service management  
– from one central, secure portal**

**Machine to machine (M2M) connectivity is the next frontier in business efficiency.**

In an M2M world, devices as diverse as utility meters, signboards, cameras, remote sensors, appliances and smartphones can be interconnected over wireless connections, and share data to support a variety of new uses and achieve increased efficiencies.

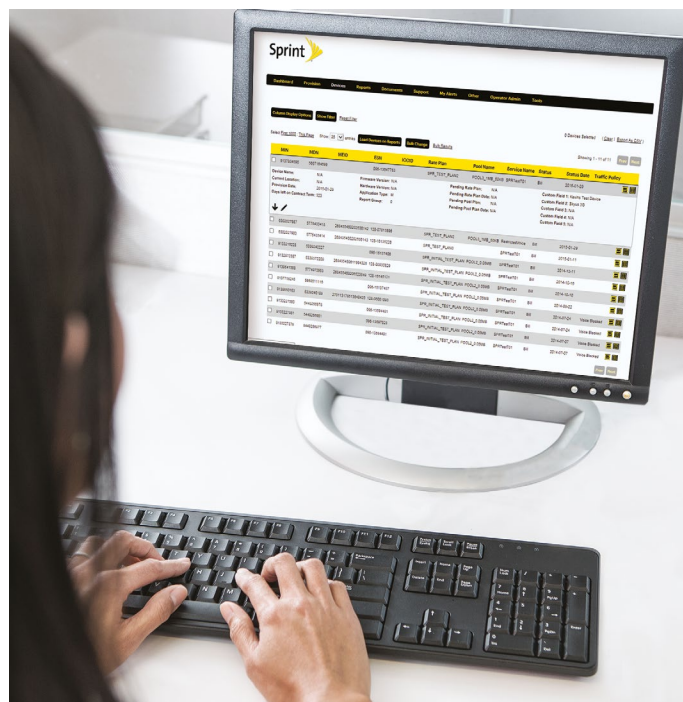

But with that efficiency comes the complexity of managing hundreds, thousands or even millions of devices. That's where you need Sprint Command Center 2.0.

**What is Sprint Command Center 2.0?**

Sprint Command Center 2.0 is a centralized, secure, self-service portal that lets you manage all of your M2M devices and services in one place. By giving you control over M2M devices, it dramatically simplifies the provisioning, billing, management, and development of your M2M solutions.

**Why Sprint?**

Sprint has a long and successful history of developing M2M solutions. More importantly, you won't find a Command Center like ours anywhere else. It's unique to Sprint - because our M2M solutions are uniquely positioned to meet your needs.

*Connected World* named Sprint one of the most important and influential providers of M2M solutions for nine consecutive years.

# One Solution, Many Benefits

Sprint Command Center 2.0 makes the job of M2M device management much easier in three key ways:

## 1. Easy Provisioning

Whether you're connecting a single device type or thousands of different devices, Sprint Command Center 2.0 gives you the power to easily implement automated or 'on-the-fly' device management features, such as activations, deactivations, suspensions and more.

You can pre-set activations based on usage, time based or type of usage thresholds. Also, when it comes to conducting remote testing of devices in the field, you can even wake up a powered-down device using our unique "shoulder-tap" technology.

## 2. Flexible Billing

Sprint Command Center 2.0 offers dynamic rate plan capabilities and flexible pooling arrangements. It provides a Business Rules Engine for device billing, giving you greater control over costs by allowing you to set multiple types of customized billing triggers. For example, you can set a device's assigned billing plan to start only when a pre-defined usage threshold is reached.

## 3. Powerful Policy Management and Tracking

Our wide selection of policy enforcement tools let you manage your devices based on their unique needs – whether by time of day, geography, usage limit, or something else. You can also gain visibility of your connected business thanks to our robust capabilities, and benefit from secure VPN connectivity, private or dynamic static IP addresses and many other security features.

## Sprint: Your Provider for M2M Solutions

M2M opens up new and transformational ways to connect people, devices and systems – creating great opportunities for your business. And with Sprint Command Center 2.0, you can manage it all easily from a single, robust, secure, self-service platform.

## Additional key features and benefits include:

- Quick, convenient management of M2M devices and services
- Secure platform with built-in encrypted VPN security standard for protected access
- Simple, remote control of key management tasks
- Flexible billing and usage capabilities
- Real-time alerts, automatic triggers and notifications to ensure robust device management
- Extensive reporting to support real-time assessment and on-going solution optimization
- Easy integration with existing infrastructure and applications via open APIs
