Dialpad Business Voice

Business Voice in the cloud. A checklist.

Moving on up?

If you've read the previous guides in this series, you'll know that Dialpad Business Voice from Sprint offers a simple, flexible and predictably priced solution for helping your people connect and collaborate virtually anywhere they go. But making the leap into the cloud isn't always an easy decision.

In this short guide, we'll recap some of the great reasons why moving your business phone system to the cloud makes sense. And we've also compiled a handy checklist to help you figure out if making the move is right for you.

Why choose Dialpad Business Voice from Sprint?

Dialpad Business Voice is designed for the way your people work today. They're mobile, not chained to desks. They need to collaborate, whenever, wherever. And they need tools that make their jobs simpler, not more complex.

By moving your business phone system to the cloud, you'll liberate your people from the constraints of desk phones. And you'll liberate your business from the time and expense of running a PBX.

Mobile productivity and collaboration

When people can communicate and collaborate using any device they want, pretty much anywhere they want to go, good things start to happen.

People are free to work in the way that makes them most effective. And when they can work together more productively, decisions get made quicker, innovations get to market faster, and the customer experience gets slicker.

With one business number that calls all your devices, and advanced call controls that are simple to use, Dialpad Business Voice from Sprint makes it easier to stay in touch and keep everyone in the loop.

Connect and share
information virtually anywhere

Streamline collaboration
and simplify remote working

Empower your people
to get more done

Application integration

Nobody likes having to flip back and forth between multiple apps just to complete one simple task. But unless your business communications systems are integrated with your collaboration tools, that's exactly what happens. It's frustrating for users and customers, and it's draining productivity from the business.

Dialpad Business Voice from Sprint is fully integrated with the productivity and collaboration apps people use every day. Complete integration with G Suite* and Microsoft Office 365 makes it simple for everyone to access and share all the relevant information during the conversation.

Collaborate on shared files with ease

Put conversations in context, with the most relevant content

Connect the right people with the right information

Costs and management

Buying, managing and upgrading a PBX takes a lot of time and money. Time and money that could be better spent on hitting your strategic targets.

Dialpad Business Voice from Sprint gets rid of your upfront PBX costs overnight. Instead, your people get a communications tool that's built for the way they work today, and you get a predictable price of just \$15 per user per month.*

And it's not just upfront PBX costs that vanish. Dialpad can save you 40-60% on your monthly costs, compared to running business voice services on a PBX.†

Plus, you can manage all your locations from a single web-based interface — putting a big dent in the management overheads of a traditional business voice setup. And as your business grows, your voice communications can match it every step of the way.

Pay as you go, and scale as you grow

Eliminate upfront costs and PBX management headaches

Get predictable costs, per seat per month

*Taxes and surcharges apply

†Potential savings based on internal Sprint market research on average IT spend for hardware investments, monthly costs per person, integration, ongoing maintenance and support costs for a on-premise PBX phone system by leading service providers. Actual savings may vary.

Are you ready for the switch?

Still unsure about moving your business phone system to the cloud? Use our checklist to determine if Dialpad Business Voice could be right for you.

1 Enabling people

Our people need to be able to communicate from anywhere, at any time, on any device

Being able to simply transfer calls, share voicemails and have conversations involving multiple colleagues is important to our people

Our people need to be able to share documents while communicating

2 Integration

Our employees have existing Google and Microsoft applications that they rely on for work

It would be helpful to have our company directory sync to our user's devices easily

We would like to give our employees more context during their conversations, including LinkedIn, Twitter and Google+ social profile information on the people they're talking to

3 Costs

We've evaluated our current mobility and business phone costs

We think we're spending too much on our voice communications

We value predictable pricing in our communications solutions

If we were to upgrade our current set up it would be expensive and cumbersome

4 Management

The management of our communications is complex and time-consuming

We would rather have our IT department working on new innovation and strategic initiatives instead of spending so much time configuring and maintaining our communications infrastructure

Ideally we'd like to outsource all the management and maintenance involved in our communications

Scaling up to accommodate new employees or open new sites can be complicated

Are you ready for the switch?

5 Preparing for the future

We understand what our people need from a business phone

We know what we need now, and we have a clear picture of what we'll need in the future

We've considered how we'll upgrade aging devices and PBX systems — and how much it will cost

Answered mostly 'Yes'?

Dialpad Business Voice from Sprint could be just what you need.

Take a look at the rest of the mini-guides in this series to see how moving your business phones to the cloud can help your people, and our business.
