

Asset Management

Make sure everything is where it should be

Every business with valuable stuff — such as heavy and valuable equipment like construction machinery — is constantly striving to keep better track of it. If your machinery or other property was missing or stolen, how quickly could you find it, if at all?

With Sprint Asset Management solutions, you can rest easy that your valuable mobile assets are where they should be, and deployed efficiently — so your business runs even more smoothly.

These solutions help you maximize asset utilization and find lost or stolen assets quickly; reducing the need to buy more than you really need. They also provide accurate documentation of where and when your assets were deployed, helping with record keeping and billing.

How we can help

GPS-enabled telematics solve an age-old problem — how to keep track of valuable items, whether they're on your premises, or deployed in the field.

With their help, you can access important information about location and status easily through a user interface from your PC, tablet, or smartphone. And that means you can make sure every asset is earning its keep — and is always in the right place for your business or for customers. The result? You can boost productivity, and avoid buying more assets unnecessarily. Internal cost centers and external rentals can also be billed correctly, using geo-precise records.

With Sprint Asset Management solutions you can benefit from:

- State-of-the-art technology to track and monitor asset location and activity
- Greater insight into the safety of your assets with feature options such as temperature monitoring and movement monitoring
- Customizable reports and alerts to help you manage your assets more easily
- Sprint experience and expertise to select and implement a solution that meets the needs of your business

What you'll get

With an Asset Management solution from Sprint you can get:*

- Location monitoring of your asset locations either in real-time, or periodically, depending on need
- Equipment engine hours monitoring
- Customizable reports and alerts
- Reliable tracking for powered and non-powered assets

*Available features may vary by solution

What this means for you and your organization

An Asset Management solution from Sprint can help you:

- Increase productivity and efficiency by reducing time spent looking for assets
- Optimize utilization with better scheduling of all available assets
- Save time and money looking for assets and buying extra ones when they can't be located
- Prevent theft and unauthorized use — receive alerts when assets cross predefined boundaries and recover them quickly
- Reduce loss by quickly recovering lost or stolen assets
- Improve customer satisfaction and revenues with exact records of where and when assets were deployed

Is Asset Management right for you?

Does your organization:

- Have valuable, mobile assets at remote locations?
- Take more than a few seconds to locate an asset when it's needed?
- Suffer from assets lost or misplaced leading to added costs chasing them down or having to buy the replacements
- Need to enhance business productivity, customer service and all-round efficiency?

If you answered 'yes' to any of these, then Sprint Asset Management solutions will reap rewards for your business.
