

Software-Defined WAN (SD-WAN)

Embrace a more agile, optimized network

Let Sprint SD-WAN help you bring simplicity to the way you grow your network, how you manage performance and how you intelligently direct traffic across the network. Deploy a flexible, cost-effective solution that addresses the complexity of today's networking environment, while enabling you to focus resources on your core business.

Flexible WAN architecture that enables application-driven solution design:

Sprint SD-WAN includes:

- **Maximizes** bandwidth utilization across all available links
- **Enhances** application performance and network reliability
- **Automates and streamlines** time-consuming IT tasks
- **Reduces** operational costs and security concerns
- **Seamlessly supports** adoption of SaaS, cloud applications, IoT
- **Provides transport flexibility**
- **Effortless integration** with existing WAN (no rip and replace)
- **Boosts performance** of converged and real-time applications
- **Simplifies** planning and reduces costs
- **Provides choice** of management options
- **Sprint expertise**, experience, and award-winning support during your SD-WAN deployment
