

Take telecom to the next level.

Get work done virtually anywhere with Sprint Global Multiprotocol Label Switching (MPLS).

What is MPLS?

A scalable Internet-based telecommunications network that delivers high-speed Internet to your global workforce over a single network platform.

Benefits

 Security	 Flexibility	 Performance
<ul style="list-style-type: none"> • Improves security for customer traffic with individual Virtual Private Networks • Enhances network visibility and management tools with Sprint Compass • Enables Secure Internet and Remote Access to the corporate intranet 	<ul style="list-style-type: none"> • Connects to Global DSL, Ethernet, wireless WANs and mobile devices • Delivers a variety of multiple routing protocol support options • Allows Internet access in over 150 countries 	<ul style="list-style-type: none"> • Prioritizes important traffic with Class of Service capabilities • Provides speed options from 64 Kbps to 5 Gbps or fractional 10 Gigabit Ethernet • Avoids network congestion rather than routing traffic around congestion
