

Asset Management gets connected

How to boost your ROI — the smart way

Knowledge is the lifeblood of effective asset management.

Whether it's a shipping container on a flatbed, or a Bobcat[®] Loader sitting idle in the yard — you need to know where that asset is and how it's operating, at any given second of the day.

To complicate matters, asset operations managers are increasingly called to improve efficiencies, and maximize utilization and ROI across mixed-asset fleets.

Losing an asset can mean losing an opportunity for your organization. Accurate asset tracking and monitoring is critical if you want to tackle these challenges head-on.

Fortunately, smart, cost-effective solutions are available to improve your business operations.

How can Sprint help?

When combined with an intelligent management solution, IoT lets you connect, track and monitor your assets in near real-time — whether they're at your premises, or out in the field.

Sprint's IoT-powered asset management solutions deliver intelligent visibility across many sectors, including:

Shipping

Track unpowered containers used in various transportation modes — from a ship, to rail, to a truck

Ground Transportation

Track and monitor trailers to improve utilization, streamline scheduling, and reduce theft or unauthorized use

Heavy Equipment

Track and monitor high-value construction equipment to improve utilization, including geofencing to guard against theft and unauthorized movement

Transportation Terminals

Track support equipment at major transportation hubs like airports or train stations

Here's what Sprint has to offer...

Using IoT technology, Sprint Asset Management solutions deliver near real-time visibility to help you track and monitor your assets, regardless of their size or application.

Better yet, you can access the critical insights you need to boost operational efficiency through a simple, user-friendly interface — anytime, anywhere.

But that's not all. With our solutions, you can:

- Improve utilization and productivity by monitoring asset condition and usage with metrics such as temperature, equipment engine hours and more
- Set asset boundaries using geofencing to deter theft and unauthorized use
- Customize reports to track your most important metrics
- Optimize application performance through our dedicated IoT network
- Save time and money with diagnostic monitoring for proactive maintenance

Not sure if you need asset management support?

Do you:

- Have high-value assets at remote locations?
- Have difficulty locating assets on-demand?
- Lack automated asset visibility?
- Often struggle with lost and misplaced assets and high backfill costs?
- Need to reduce theft and unauthorized asset use?
- Wish to reduce maintenance costs through proactive diagnostics and preventive maintenance?
- Need to boost productivity and all-round efficiency?
- Seek to improve customer satisfaction using exact records for asset deployment?

If you answered yes to any of these questions, your organization could benefit from improved asset tracking and monitoring capabilities. And we can help.

Why choose Asset Management with Sprint?

We've worked with many businesses to optimize asset management, so we know this is about a whole lot more than the software.

As your trusted asset management provider, we'll work closely with you to select and implement a solution that best meets your needs — and your customers' expectations.

We stand apart from other providers, and that's because we offer:

Bend-over Backward™ support

We're dedicated to delivering the highest quality of service — 24/7/365

A trusted network

Ready to help your business operate more efficiently

Innovative IoT technologies

Get superior application performance from a dedicated IoT network

Asset management expertise

Identify the best asset management solution based on your unique needs

Trusted strategic companies

Take advantage of our experience from working with multiple strategic companies
