How will 5G and IoT impact your business?

Talk one-on-one with real experts in our 5G and IoT Discovery Session. Here’s why.
5G and IoT are two of the most over-hyped tech topics today

At the same time, they do present *gigantic* opportunities for businesses to reimagine how they work and how they serve their customers.

The problem for business and tech leaders is that it’s incredibly hard to separate the hype from the realities of these technologies.

- Does it even make sense for your business to invest in these technologies?
- If you did invest in them, what precisely would your best opportunities look like?
- What’s possible now that wasn’t before, and how should you prepare for the future?
- How soon should your business get involved?

To help answer these critical, complex questions, we invite you to join us for a Sprint 5G and IoT Discovery Session.

It’s an opportunity to meet one-on-one with a 5G and IoT expert from Sprint Business, to help you determine where these technologies can impact your business.

So you can separate fact from fiction and make the most valuable, practical use of your time as you build your road map.
The discovery session is an exclusive, one-on-one meeting with a 5G and IoT expert that’s designed to find the right answers for your business.

It takes a Q&A format with one of our 5G and IoT experts who will answer all your questions about the technology. They will gain an understanding of your needs, goals and strategies, and explain how 5G and IoT can help you find the opportunities to change the way you work, collaborate, innovate and serve customers.

You’ll learn about:
• How to position IoT today to take advantage of 5G
• How 5G complements (not replaces) 4G for IoT
• The potential 5G and IoT use cases that will have the biggest impact on your business
• What industries are best positioned to benefit most from 5G and IoT
• Where your organization should start

Following the session, you’ll receive a detailed report designed specifically for your business, based on the discussion with your discovery session expert that includes real world examples and a technology road map.

What the discovery session is not
• A sales pitch in disguise
• Another presentation about what comes next
• A deep-dive, into-the-weeds conversation about Sprint Business technology

The discovery session is designed to help you explore technology that could be vital to your industry in a personalized, practical format so you can immediately start to build your strategy.

Let’s talk
Schedule your one-to-one session with a 5G and an IoT expert today. See more details on www.sprint.com/discovery
